

KHUJAND POLYTECHNICAL INSTITUTE OF TAJIK TECHNICAL UNIVERSITY

Khujand branch of Technological university of Tajikistan (KBTUT) has been organized in 1992. In September 2010 our university was reorganized as Khujand Polytechnical institute of Tajik technical university (KPITTU). Currently 4000 students are studying in it. KPITTU consists of 6 faculties and 17 areas, where more than 240 teachers are working.

Faculties:

Information Technology and Design

Economy and Business

Agriculture

Construction and Architecture

Energy

Mechanical and Technology

Areas:

Information system and technology in economy

The software in Information Technology

Technology of storage and processing of food vegetative and raw materials

Technology of storage and processing of food animal raw materials

Technology of yarn, fabric, jersey and nonwoven materials

Technology of garment

Cars and devices of the easy, textile industry and consumer services

Manufacture, storage and processing of production of plant growing

Car-service center

The organization of transportation and management on automobile and a municipal transportation

Financial and the credit

Economic

Economy and management at the enterprisers

Electrosupply

The automated electric drives

Architecture

Manufacture of building products and design

Industrial and civil construction

There are 22 laboratories, 13 computer classes with 600 computers connected to Internet, three libraries with 150 000 books and a sport hall. The good research, technical and material base and high academic staff potential of the KPITTU made it the leading university in the republic, especially in the field of informational technologies, engineering, design, construction and architecture and economy. The study programs in KPITTU are offered in three languages – Tajik, Russian and English.

Politechnical institute is a unique high school in the Central-Asian region which independently developed and introduced information technology in educational process. All academic curriculums made up on basis of ESTS credits and under the Bologna process. KPITTU has extensive experience working on internationalization and quality assurance. During 2005 till 2010 took part in 5 projects Tempus. The initiator of the first 5 projects was KPITTU itself. As a result of the project "Establishing Bologna-based internal QA system and webportal for its support"

special seminar was held on the initiative of the Ministry of Education of Tajikistan with the participation of all the rectors of universities in Tajikistan. In KPITTU Information System of University (ISU) has been created as unique Internet-based technologies, which covers all aspects of the educational process.

By the Decision of the Ministry of Education of Republic of Tajikistan KPITTU has introduced the credit system of education starting from the September 1st, 2005. Due to this necessity for changing structure of university appeared. Besides changing works of existed divisions of university, new divisions have been added -registration center of achievements of students and improvement center of career of students. As introduction of credit system of education to all universities will provide necessary environment for integration of Tajikistan to Bologna process, KPITTU created special team on studying and realization of goals of Bologna Process. Members of special team and European colleagues developed two SCM Tempus projects. With the direct support of these projects qualification requirements for two specialties (for bachelor degrees) in the field of informational technologies have been developed and currently is finishing the adaptation of the content of courses of these specialties to the EU standards. During working on projects members of team studied sets of materials about Bologna Process and came into the conclusion that many of the ambitions of the Bologna Process will be achieved by fully functioning quality assurance system.

We would be glad to find partners interested in the Tempus IV project focused on the following aspects:

National priorities for joint projects

1. International Affairs: Development network and student support.
2. Modernization curricula and program of 3 cycles in Information technology, Engineering, Economy

Regional priorities for joint projects

1. Developing Master program in Information technology, Engineering, Economy
2. Development of the life learning concept at the Khujand polytechnical institute of Tajik technical university.
3. Development partnership with enterprisers in Tajikistan and Central Asia

Tajikistan, Khujand, 30 microdistrict, Northeasten industrial area
